Allowable Subject Matter

1. Claims 18-35 are allowed.
2. The following is an examiner's statement of reasons for allowance:

Claims 18 – 25 and 35: None of the prior references teach or suggest a motivation for the claimed alcohol composition with the hydroxy distribution.

Independent claim 18 is to an alcohol composition with a mixture of hydroxymethyl-substituted fatty acids or fatty acid esters with specific hydroxy distribution ranges as it relates to the mono alcohol, diol and triol and at various weight ranges; and has a diol to triol weight ratio of greater than 5/1.

Claims 26 - 34: None of the prior references teach or suggest a motivation for the combination of processing steps used to prepare the claimed alcohol composition with the hydroxy distribution.

Independent claim 26 is a process for preparing the alcohol composition with a mixture of hydroxymethyl-substituted fatty acids or fatty acid esters with a specific hydroxy distribution ranges as it relates to the mono alcohol, diol and triol and at various weight ranges; and has a diol to triol weight ratio of greater than 5/1.

Though not claimed, the alcohol composition is used in the downstream process to make flexible foam products as stated in the specification and abstract. The prior art does not teach or suggest the use of the claimed alcohol composition with a diol to triol ratio of greater than 5/1 in the making of flexible foam.

The alcohol composition with the stated ratio of diol to triol produced flexible foam with superior qualities to foams where the diol to triol ratio was less than 5/1.

Revised Declaration I (4/28/2008) & Declaration II (4/28/2008) demonstrate that when the diol to triol ratio is below the 5/1 ratio tin splits form in the foam. Declarations IIIA and IIIB (12/16/08) provide an explanation as to why some of the reactants differed in the comparative test of Revised Declarations I and II, i.e. catalyst, amount of water, polyols (VORANOL 3137A vs. VORANOL 3512). The three (3) declarations together establish that the claimed alcohol composition produces unexpected results in the foam that is produced therefrom. The test results provided is commensurate with the claimed makeup of the alcohol composition.

Additionally, none of the prior art references teach or suggest the alcohol composition i.e. quantity of trihydroxymethylated product or diol/triol ratio. Frankel is silent, Bahrmann's implicit diol/triol ratio is less than 5/1, and Khoe's implicit ratio is in the range of 0.58 (Example 1) to 1.99 (Example 4). Nor do they suggest the process for making the alcohol composition with the diol/triol ratio greater than 5/1, wherein the hydroformylation reaction process, greater than about 80 and less than about 99 weight percent of the unsaturated fatty acids or fatty acid esters to monoformyl products, based upon the conversion of one unsaturated bond per molecule of unsaturated fatty acid or fatty acid ester.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
